acknowledgments

We are grateful for many people who helped make this volume a reality. This book would have never happened without the patience, guidance, and wisdom of our editor, Joe Calamia. His unwavering support for the project, together with his insights and suggestions, helped to create an immeasurably better end result.

We would also like to thank everyone at Yale University Press who assisted with the book’s production: our manuscript editors Joyce Ippolito and Ann-Marie Imbornoni, Christina Coffin and Maureen Noonan our production staff, Eva Skewes our editorial assistant, our rights manager Amy Hawkins, and Nancy Ovedovitz, who gave us early design feedback.

Four people were central to the project. Katie Weber’s technical prowess, from image processing and script writing, to building and managing the entire image database, kept the project moving at a clip. The artistic vision of Santiago Villota Cortes was instrumental for creating the bold and lively aesthetics of the project and made the images leap off the pages. Katie McConnell’s eye for detail added clarity to the final images and the text. Nicole Westfall’s meticulous research on each city was essential for the image descriptions.

This book emerged from discussions years ago with Nick Allen, whose experience and knowledge of cities helped shape our vision of the book. Cary Simmons’s creative aesthetic was also central in the initial phases of the project. Ellie Killiam tested and processed numerous images when the book was still just an idea.
We are enormously thankful to the entire Seto Lab at Yale—Kellie Stokes, Chris Shughrue, Kangning Huang, and Bhartendu Pandey—for their honest and critical feedback on all aspects of the project, from image processing to city selection.

We thank Barbara Schoeberl for her work and expertise crafting multiple figures in the remote sensing chapter. We would also like to thank Lindsey Voskowsky for her design and typesetting insight that unified the visual elements of the book.

Caroline Acheatel, Michael Cox, Greg Duncan, Yanin Kramsky, Jessica Leung, Rachel Lowenthal, Maggie Tsang, and Katherine Cooper provided invaluable feedback on the images, themes, and design.

We thank Digital Global for donating images of Palmanova, Zaatari, Eixample, Mysore, and McMurdo station and Miguel Román at NASA Goddard Space Flight Center for providing the Suomi-NPP VIIRS nighttime images of Puerto Rico. We are also grateful for support from Garik Gutman and NASA LCLUC grant NNX15AD43G.

Finally, this project wouldn’t have been possible without the unconditional support of our families: Rob Davis, Jing Seto, and Marie and Jim Reba.
