Land and Atmospheric Research Applications in Asia

Forthcoming, Summer 2016

- Maximizes reader insights into the quantification of land cover/land use changes (LCLUC) and greenhouse gas emissions in Asia.
- Focuses on large spatial scales integrating satellite remote sensing and ground based approaches.
- Broadens understanding on integrated approaches combining top-down and bottom up methodologies including modeling for characterizing LCLUC and emissions.
- Explores the causative factors and impacts of LCLUC and emissions due to population growth, industrial activities and energy demand in Asia.

In Asia, high population growth together with rapid economic development are causing immense pressure to convert land from natural and agricultural areas to residential and urban uses with significant impact on emissions and ecosystem services. This edited volume sheds new light on the causative factors and impacts of LCLUC on the greenhouse gas (GHG) and aerosols in Asia. The volume will also focus on the use of remote sensing, geospatial technologies, and integrated approaches to characterize LCLUC and emissions.

Articles are invited from international researchers working on remote sensing of LCLUC, fires, GHG emission inventories, aerosols, and land-atmospheric interactions in Asia.

Submission Deadline: December 31st, 2015
