

# Overview of Operational Remote Sensing in the USDA Forest Service

Chuck Dull  
USDA Forest Service  
National Remote Sensing Program Manager  
Washington, DC

# USDA Forest Service

- 155 National Forests
- 192 Million acres
- 20 National Grasslands
- 30,000 employees
- 860 million recreation days/yr
- 3.4 billion board feet timber sales
- 4,400 miles of wild and scenic rivers
- 7,700 miles of scenic byways
- 23,000 recreation sites
- \$21 billion worth of hunting & fishing to U.S. economy

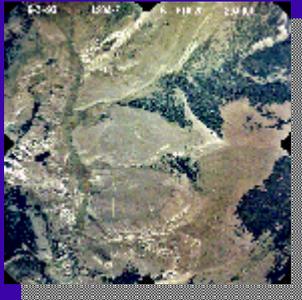

**The Forest Service carries out its mission, "Caring for the Land and Serving People," through four main activities:**

- National Forest System**
- Research**
- State and Private Forestry**
- International Programs**

# Role of Remote Sensing

**Remotely Sensed Data**

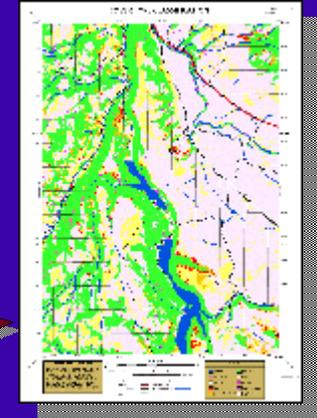

**Forest Service GIS and Image Analysis**

**Forest Service Users**

**Forest Service Core Data Layers**

**Products:  
Answers,  
Reports,  
Maps...**

# Where do we get Remote Sensing to Support Conservation Leadership?

New and Traditional:

- Air Borne Observations
- Space Based Observations

# Remotely Sensed Data

## Aerial photography

Natural color, color infrared, B&W

Scales from 1:2,000 to 1:60,000

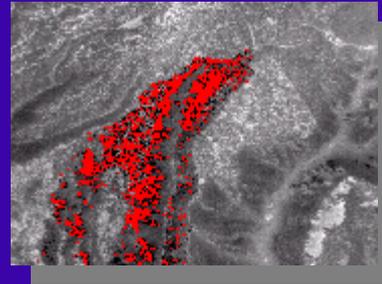

## Airborne digital

Thermal infrared scanner

Multispectral scanner

Digital frame cameras

Airborne video

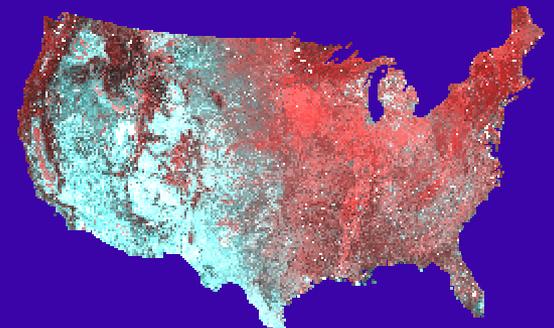

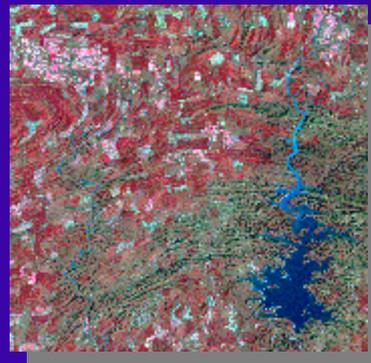

## Satellite

Landsat TM & MSS

SPOT; Ikonos II

IRS C/D

AVHRR, SeaWiFS

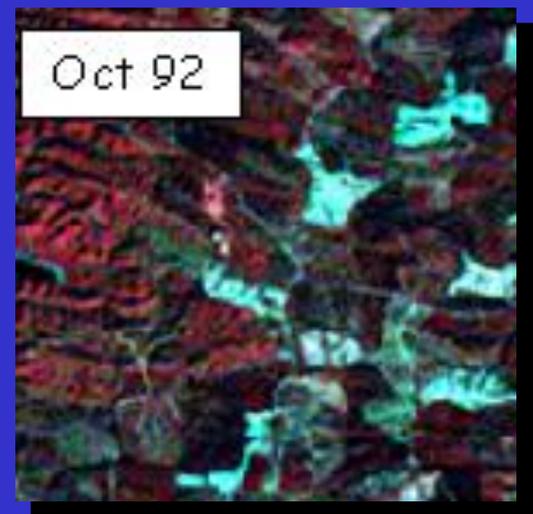

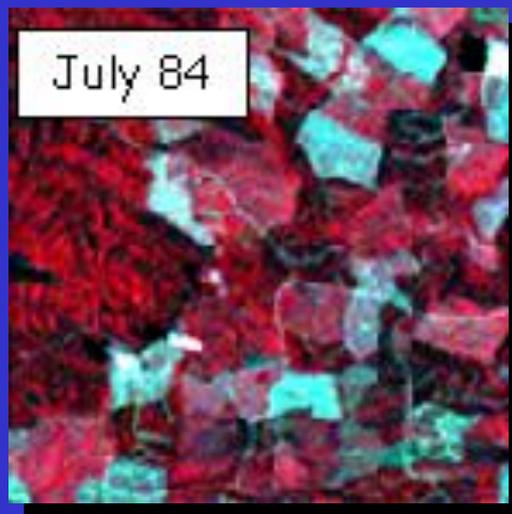

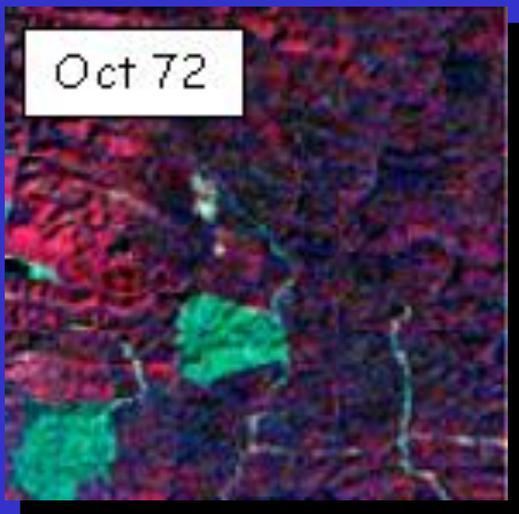

# USDA Forest Service Aerial Photography Program

- National Aerial Photography Program (NAPP)
- Resource Aerial Photography
- Force Account Aerial Photography
- Project Aerial Photography
- NASA High Altitude Aerial Photography

# Opportunities for Sharing Satellite Imagery

- USDA - Satellite Imagery Library
- NIMA Commercial Imagery Program
- NASA Earth Science Enterprise Scientific Data Base
- Multi-resolution landscape characterization database  
MRLC - GAP data and continued collaboration with  
USGS-EDC

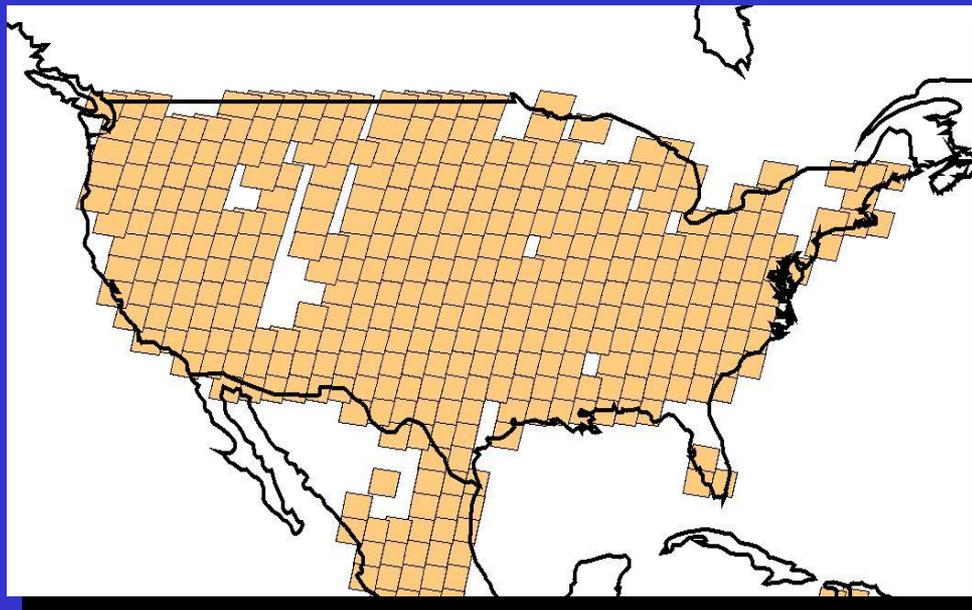

# USDA – Satellite Imagery Library

- USDA is one of world's largest users of satellite imagery.
- Maximize cost of expenditures on satellite imagery; leverage gained from a single USDA purchasing body – unprecedented discounts.
- Especially important as the number of space-based sensors increases over the next few years.

1999 Acquisitions

- 11,000 (Optimal) and 4,000 (Minimal) scenes per year
- Delivery within two weeks of acquisition
- 50% cloud cover or less
- Geocoded

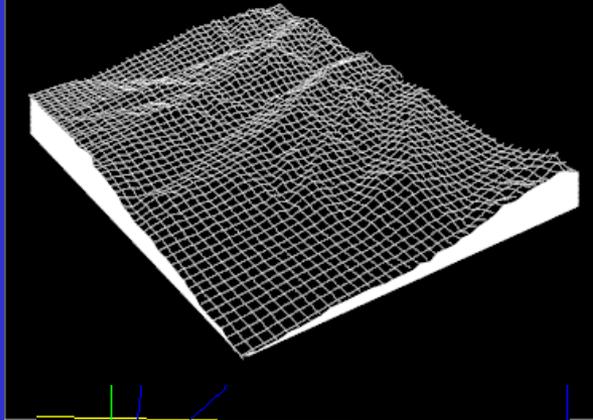

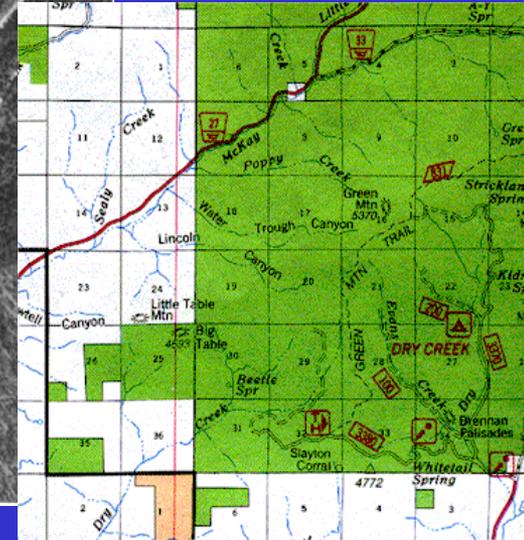

# Geospatial Service and Technology Center

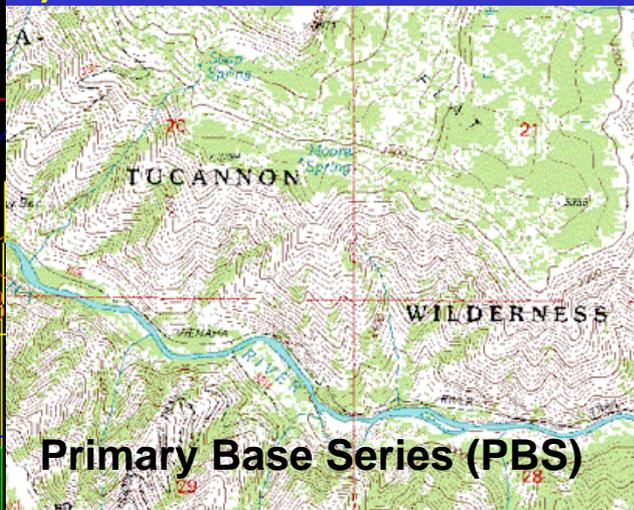

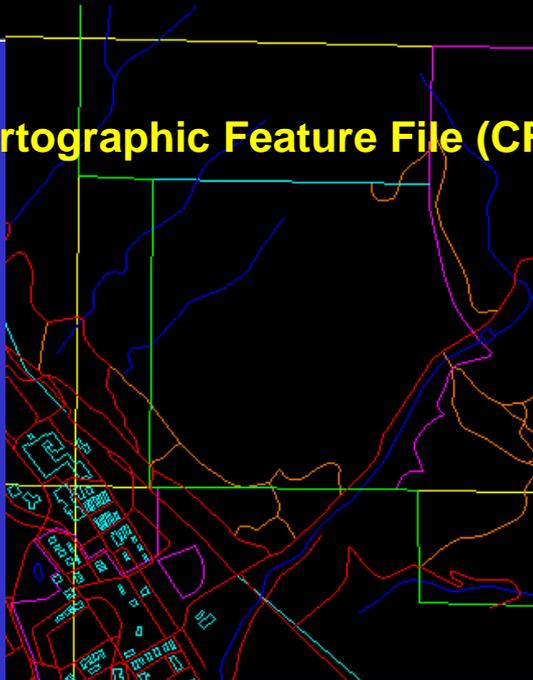

Digital Elevation Model (DEM)

Digital Orthophotography

Cartographic Feature File (CFF)

Primary Base Series (PBS)

Secondary Base Series (SBS)

Services Include:

Digital Data Clearinghouse

Technology Transfer

**Remote Sensing**

**Applications Center**

**The mission of RSAC is to provide technical support to Forest Service resource specialists and managers in the use of remote sensing, image processing, GIS, and related geospatial technologies for all resource applications. The four main program areas are:**

- Operations
- Liaison and Special Projects
- Integration of Remote Sensing
- Training & Technology Awareness

# Current Rule Making Initiatives

- **Planning Rule**

Overarching framework for implementing roadless and road policy initiative.

Rewrite existing planning regulations.

<http://www.fs.fed.us/forum/nepa/rule/>

- **Road Management Policy**

For existing roaded areas.

Draft rule March 2000— Final rule October 2000.

<http://www.fs.fed.us/news/roads/>

- **Roadless Conservation**

For inventoried and other roadless areas.

Draft EIS/rule May 2000— Final EIS/rule December 2000.

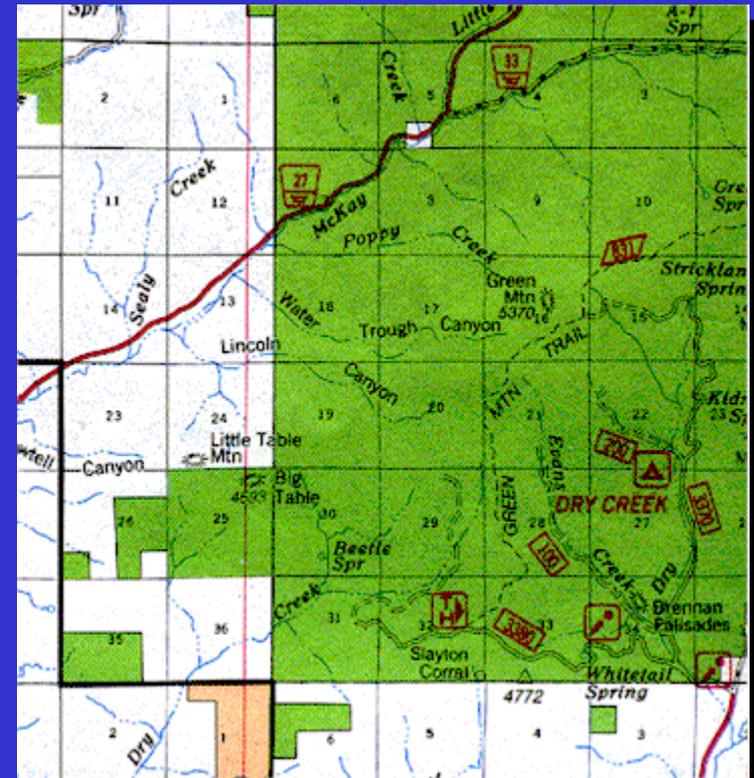

<http://roadless.fs.fed.us/>

# Proposed Road Management Policy

- To provide a National Forest road system that is safe, responsive to public needs, environmentally sound, affordable, and efficient to manage.

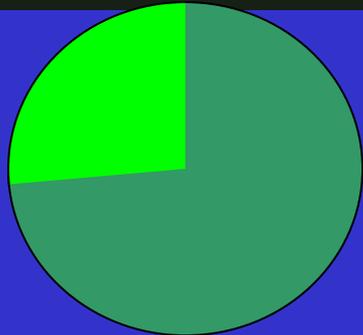

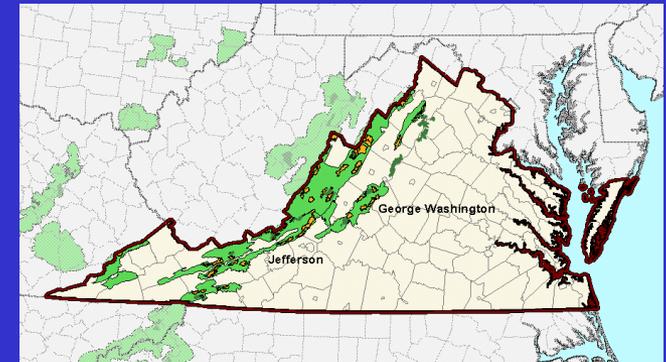

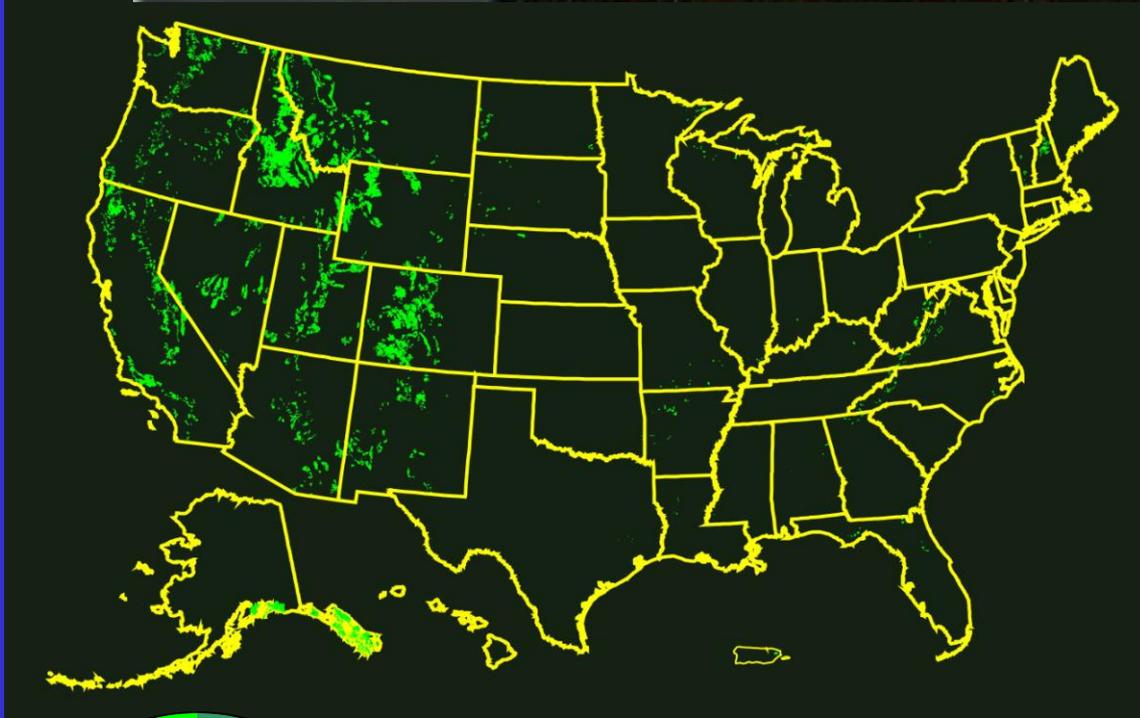

3-D Computer Data Visualization

Secondary Base Series

# Roadless EIS Project

## Data, Maps and Guidelines

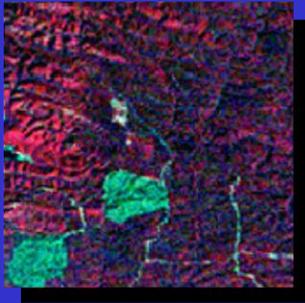

- Total NFS acres 192 million
- Inventoried Roadless Acres 58.5 million – 30% of NFS

# Natural Resource Agenda

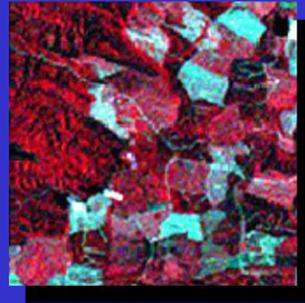

# Sustainable Forest Management

- Meeting the needs of the present without compromising the needs of the future.

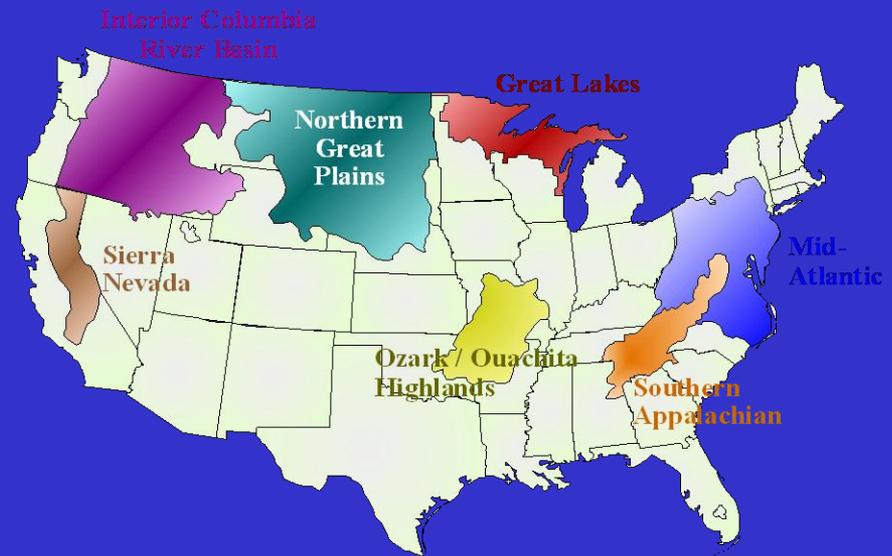

Ouchita NF 1972

Ouchita NF 1984

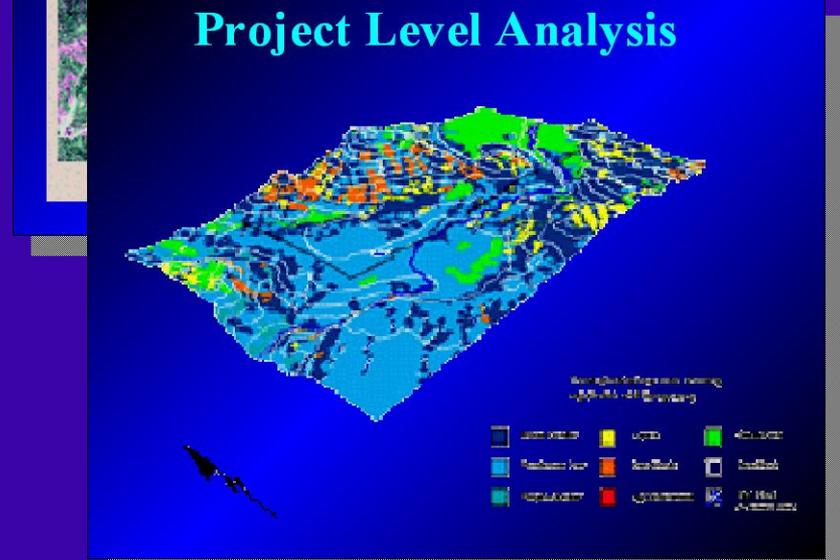

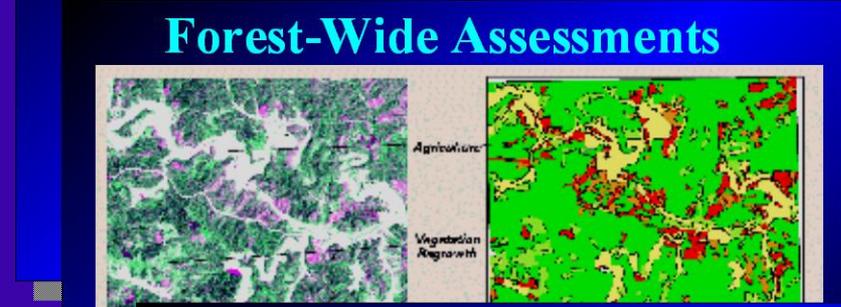

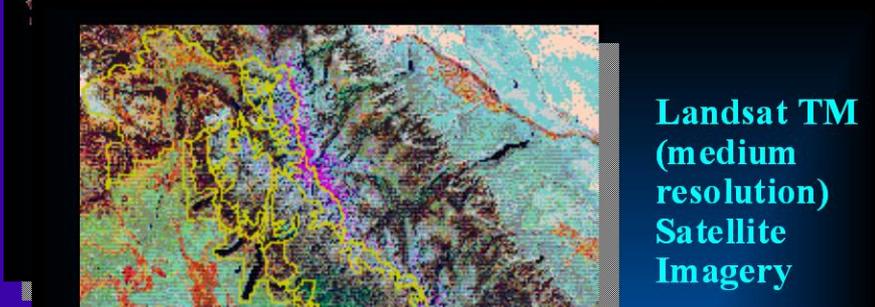

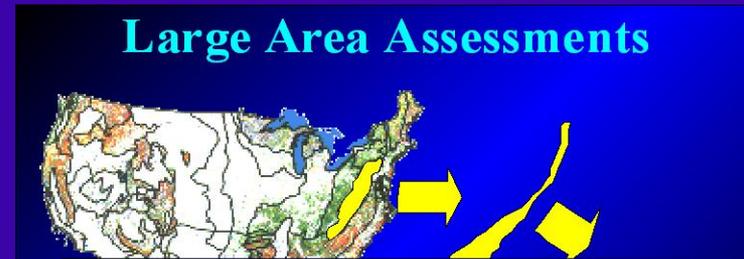

Identifies Ecosystem Fragmentation

Large area assessments provide status and conditions across all ownerships.

Supports measurements of sustainable forest management such as “Criteria and Indicators”

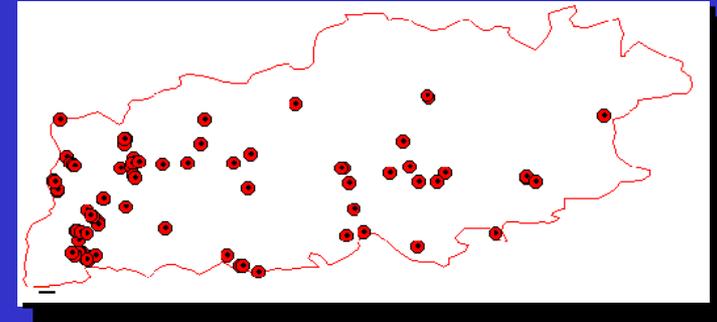

# Remotely Sensed Data & Project Scale

Data

Applications

# Recreation--Improving the quality and quantity of public information

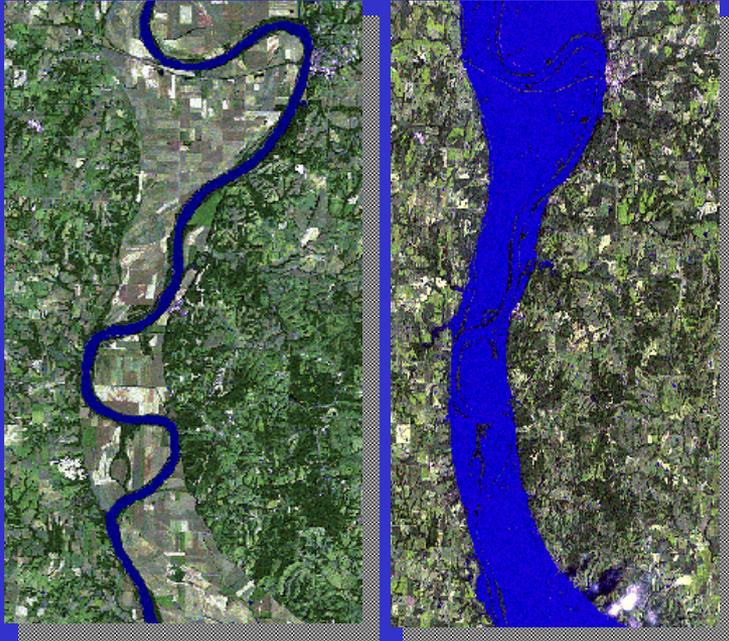

High Uintas Wilderness  
Campfires mapped  
using NIFC scanner

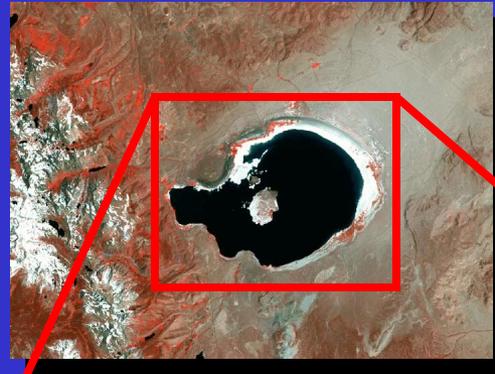

An information shared resource to strengthen relationships with partners, communities, and others.

# Watershed Health and Restoration

## Pre and Post Flood Mapping

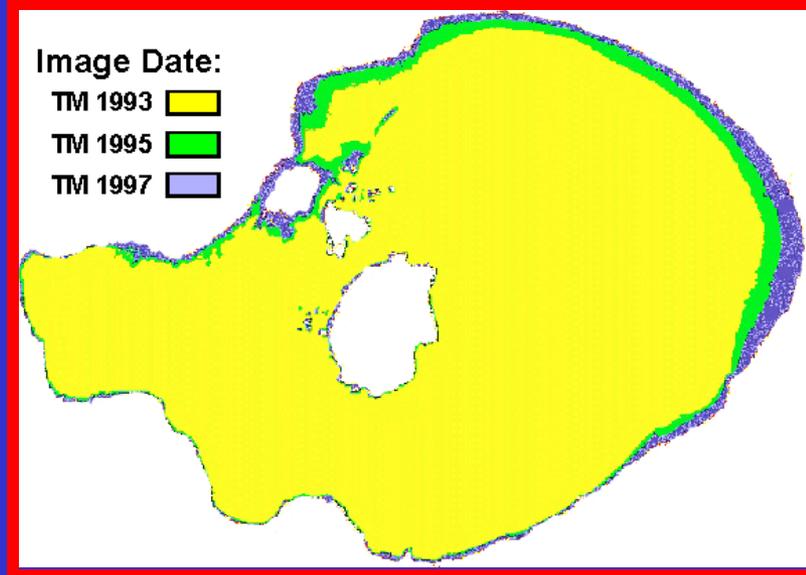

## Lake Level Monitoring

## Forest Health Protection

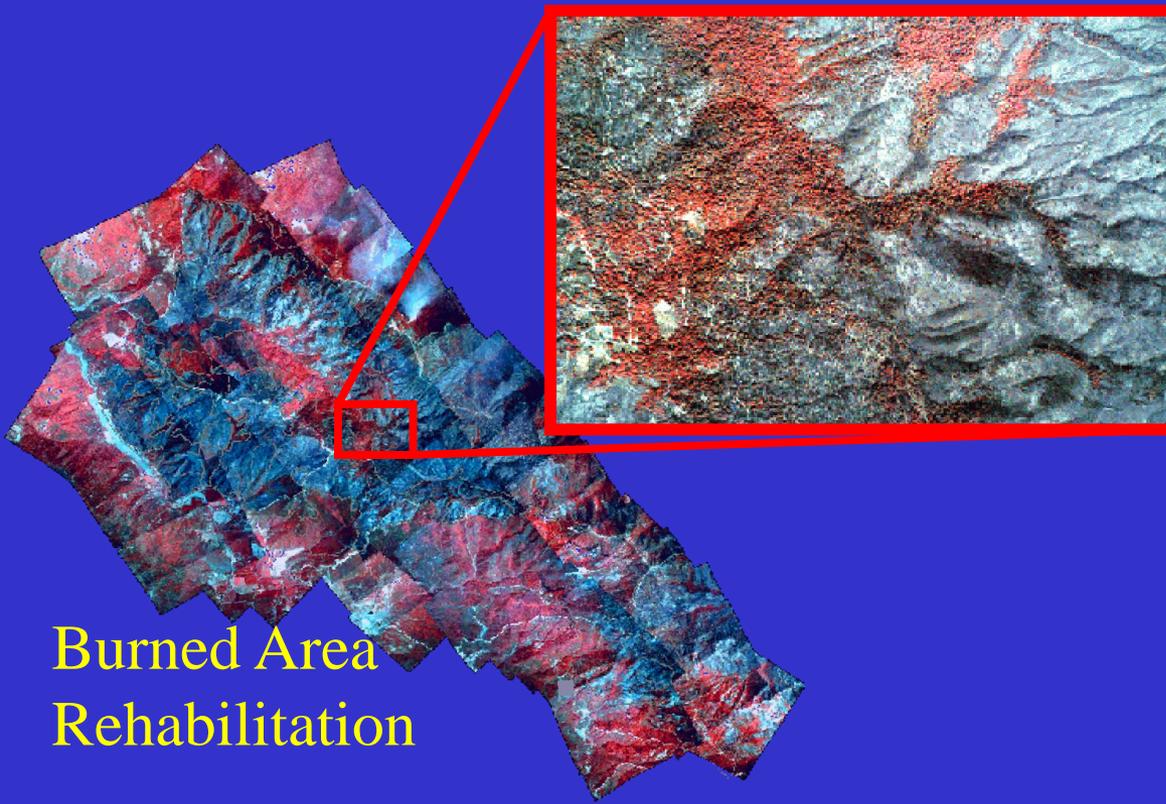

Inventory Resources  
Transcend Ownership Boundaries  
Monitoring Change and Progress  
Assure Favorable Flow

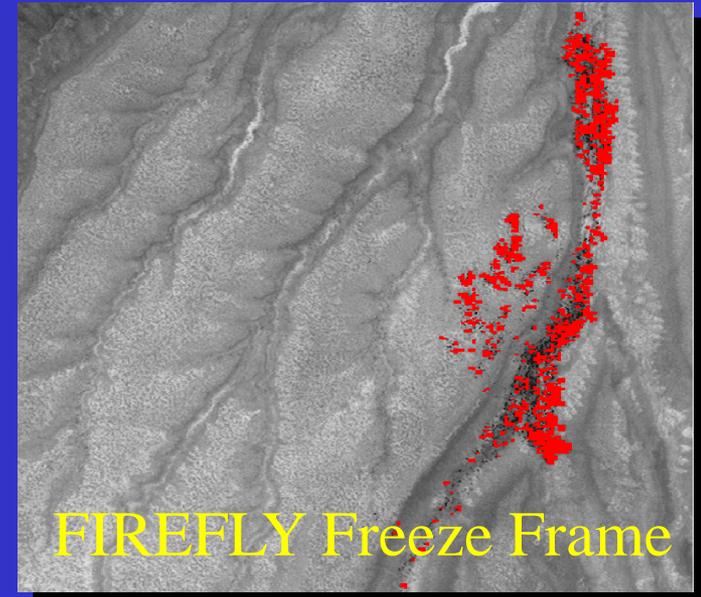

# Wildland Fire Support

- Wildland Fire Requirements and Support
  - Joint Fire Sciences Program
  - Disaster Initiatives
  - Committee for Earth Observation Satellites

Burned Area  
Rehabilitation

FIREFLY Freeze Frame

## Thirteen-Year Wildland Fire Comparison Statistics Year-to-Date for the United States

As of August 30	Number of Wildland Fires	Number of Acres
<b>2000</b>	<b>73,357</b>	<b>6,359,395</b>
1999	69,582	4,220,908
1998	58,438	1,910,850
1997	48,010	2,692,804
1996	85,128	5,291,697
1995	62,468	1,571,543
1994	57,382	3,037,756
1993	47,809	1,567,552
1992	69,798	1,570,809
1991	59,906	1,985,386
1990	47,770	3,764,570
1989	44,574	1,440,308
1988	67,248	3,409,728

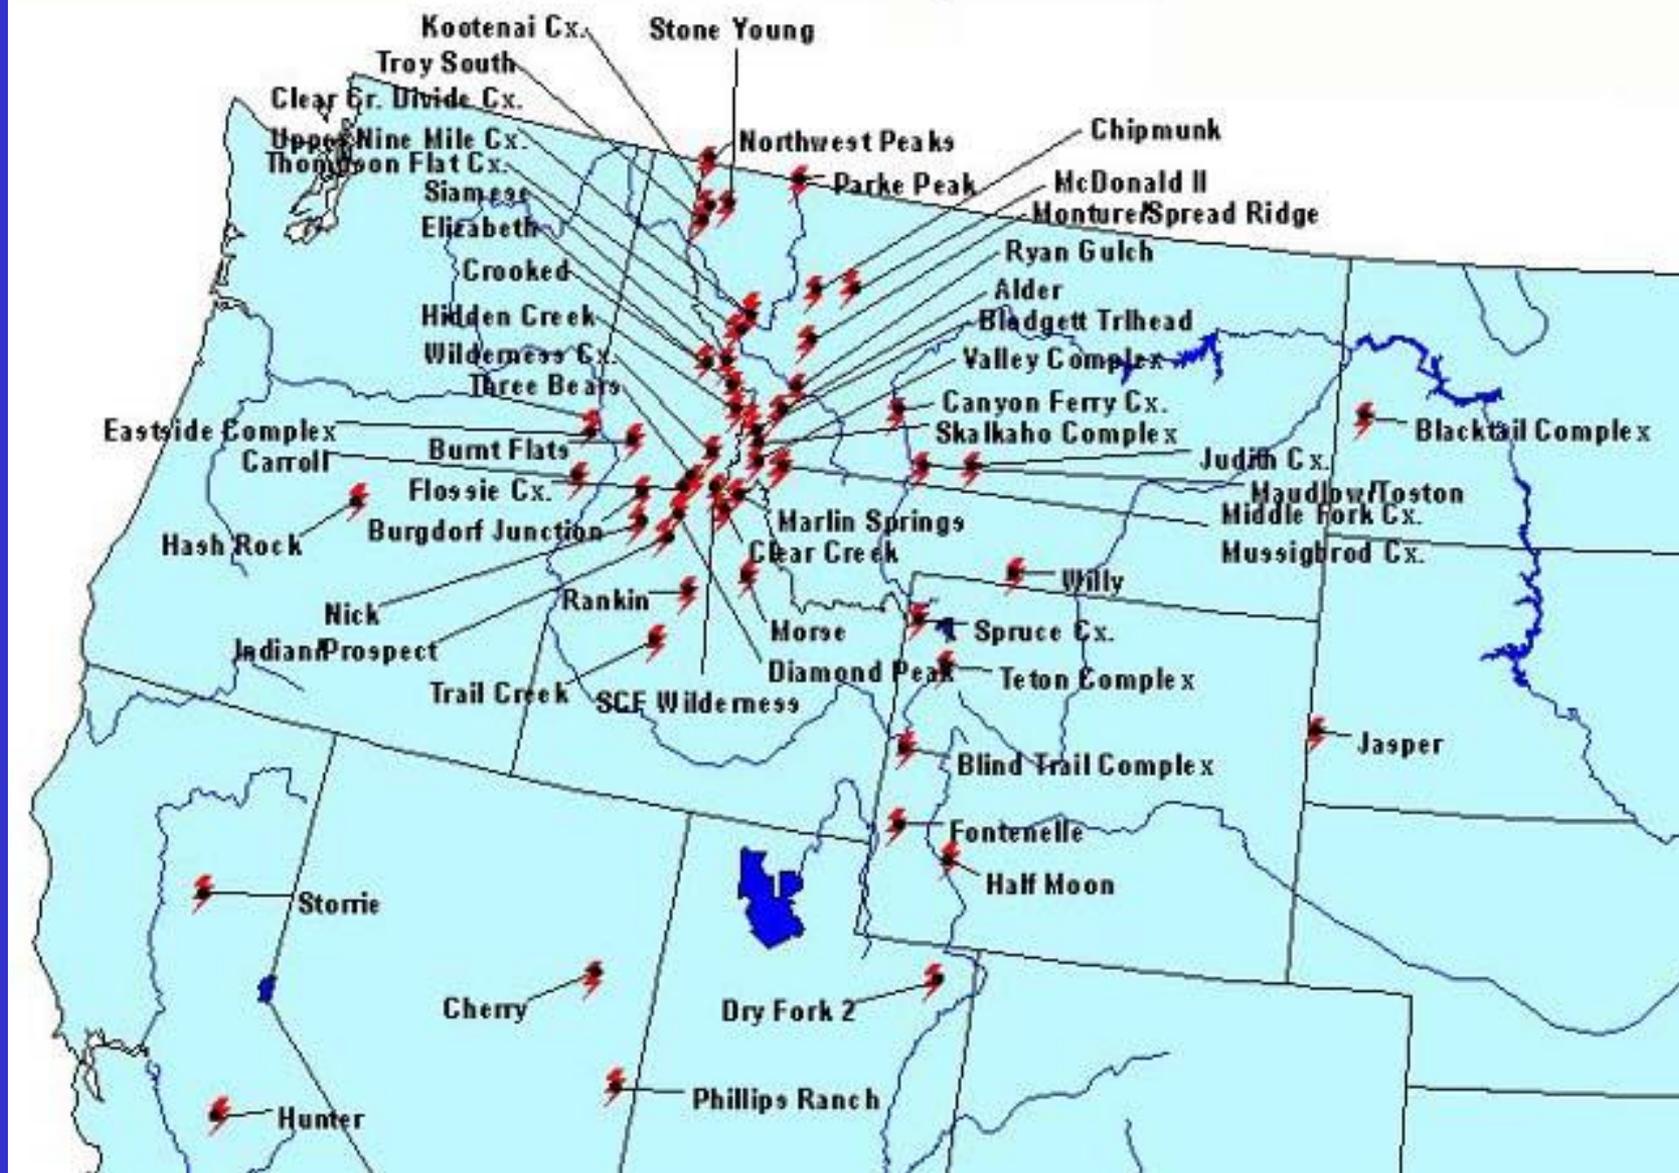

**2000 6,359,395**

**1996 5,291,697**

**1989 3,409,728**

# Large Wildland Fires 8/30/2000

Only Fires Greater Than 1,000 Acres Shown

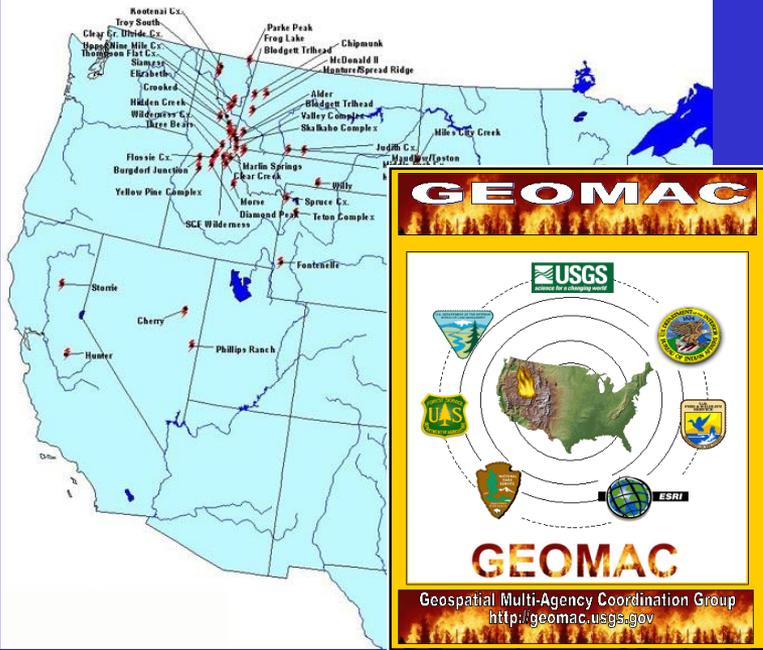

Boise, Idaho

# National Interagency Fire Center

Large Wildland Fires 9/5/2000  
Only Fires Over 1,000 Acres Shown

The National Interagency Fire Center (NIFC) in Boise, Idaho is the nation's support center for wildland firefighting. Seven federal agencies call NIFC home and work together to coordinate and support wildland fire and disaster operations.

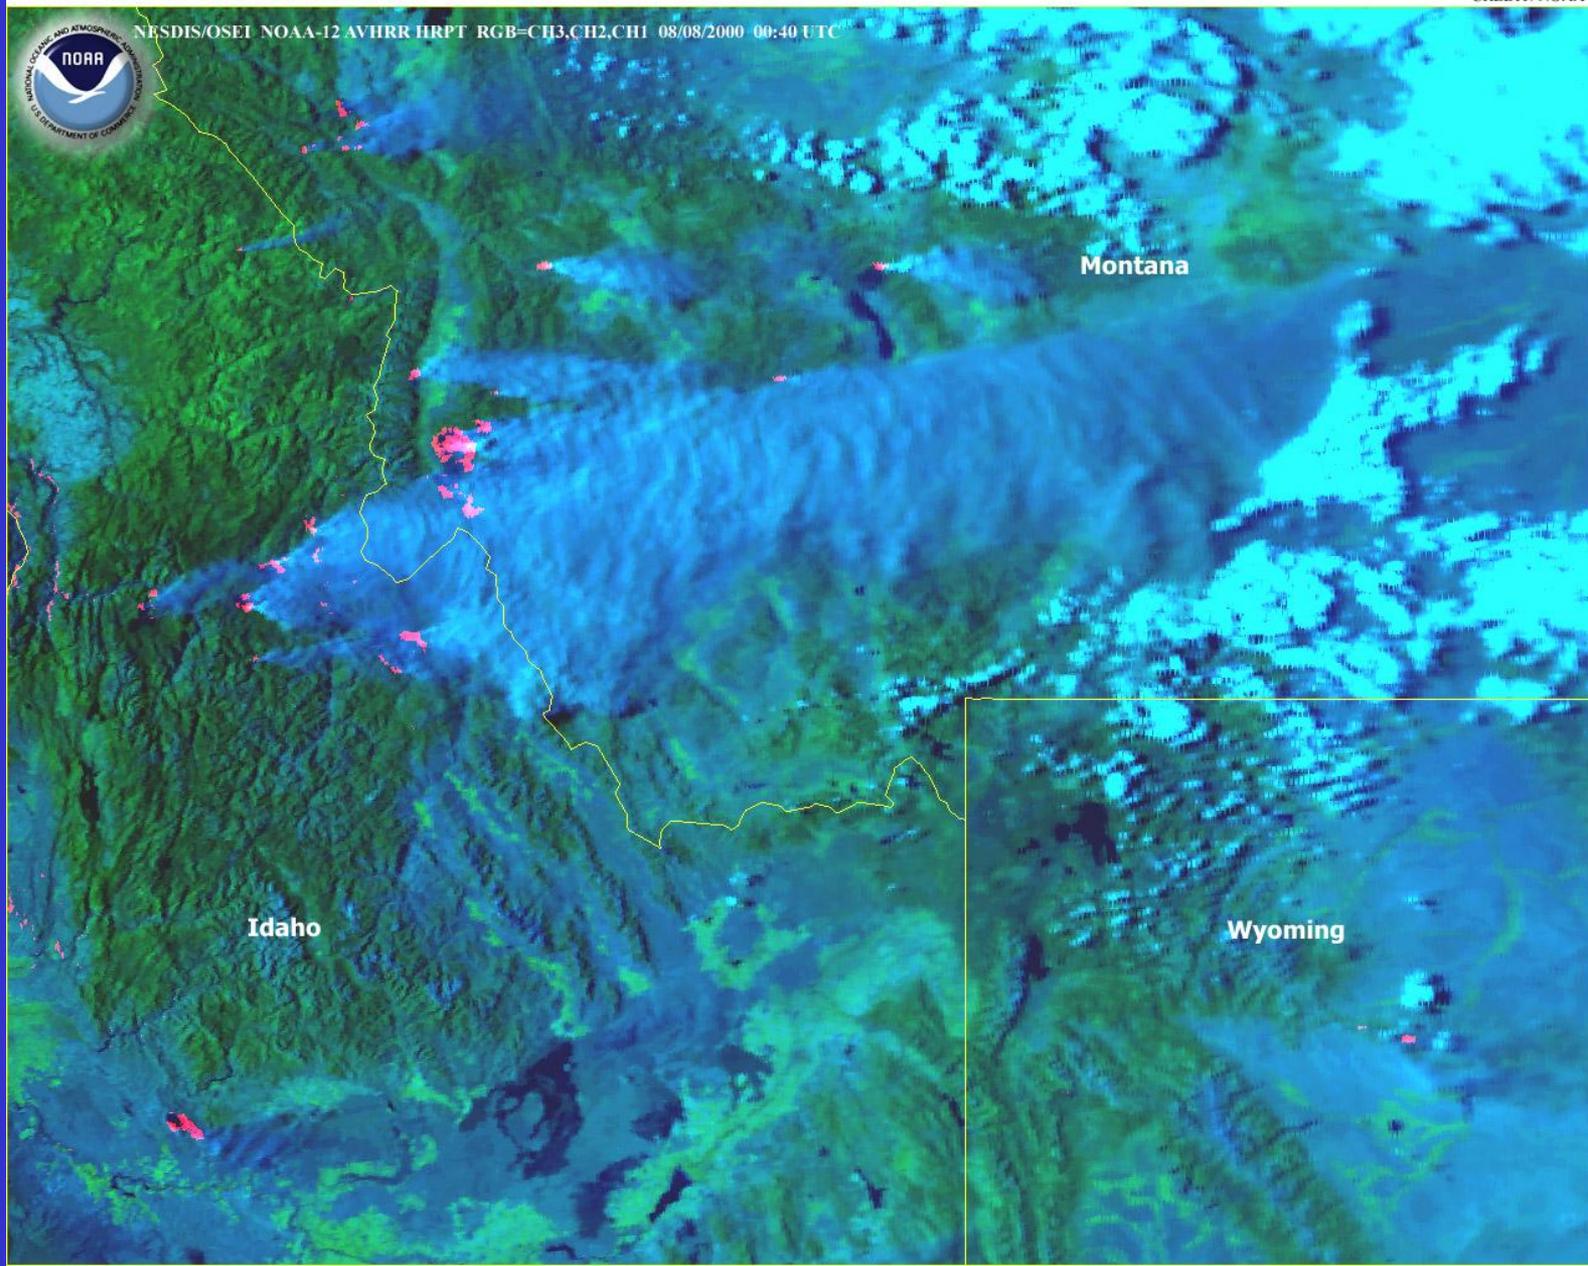

# Wildland Fire Suppression and Response

- Work involves acquiring imagery, mapping polygons, transmitting polygons via e-mail, uploading to FTP site, coordinating with the incident, and coordinating with national level priorities at NIFC
- Fire data includes:
  - Fire Perimeter
  - Active Fire Front
  - Spot Fires
  - Estimated Perimeters

Large heat signatures (red) and a dense blanket of smoke (light blue) from the many large fires burning in Idaho and western Montana are visible in this NOAA-12 image. The dense blanket of smoke extends approximately half way across Montana while a thinner blanket continues into the Dakotas.

CREDIT: NOAA

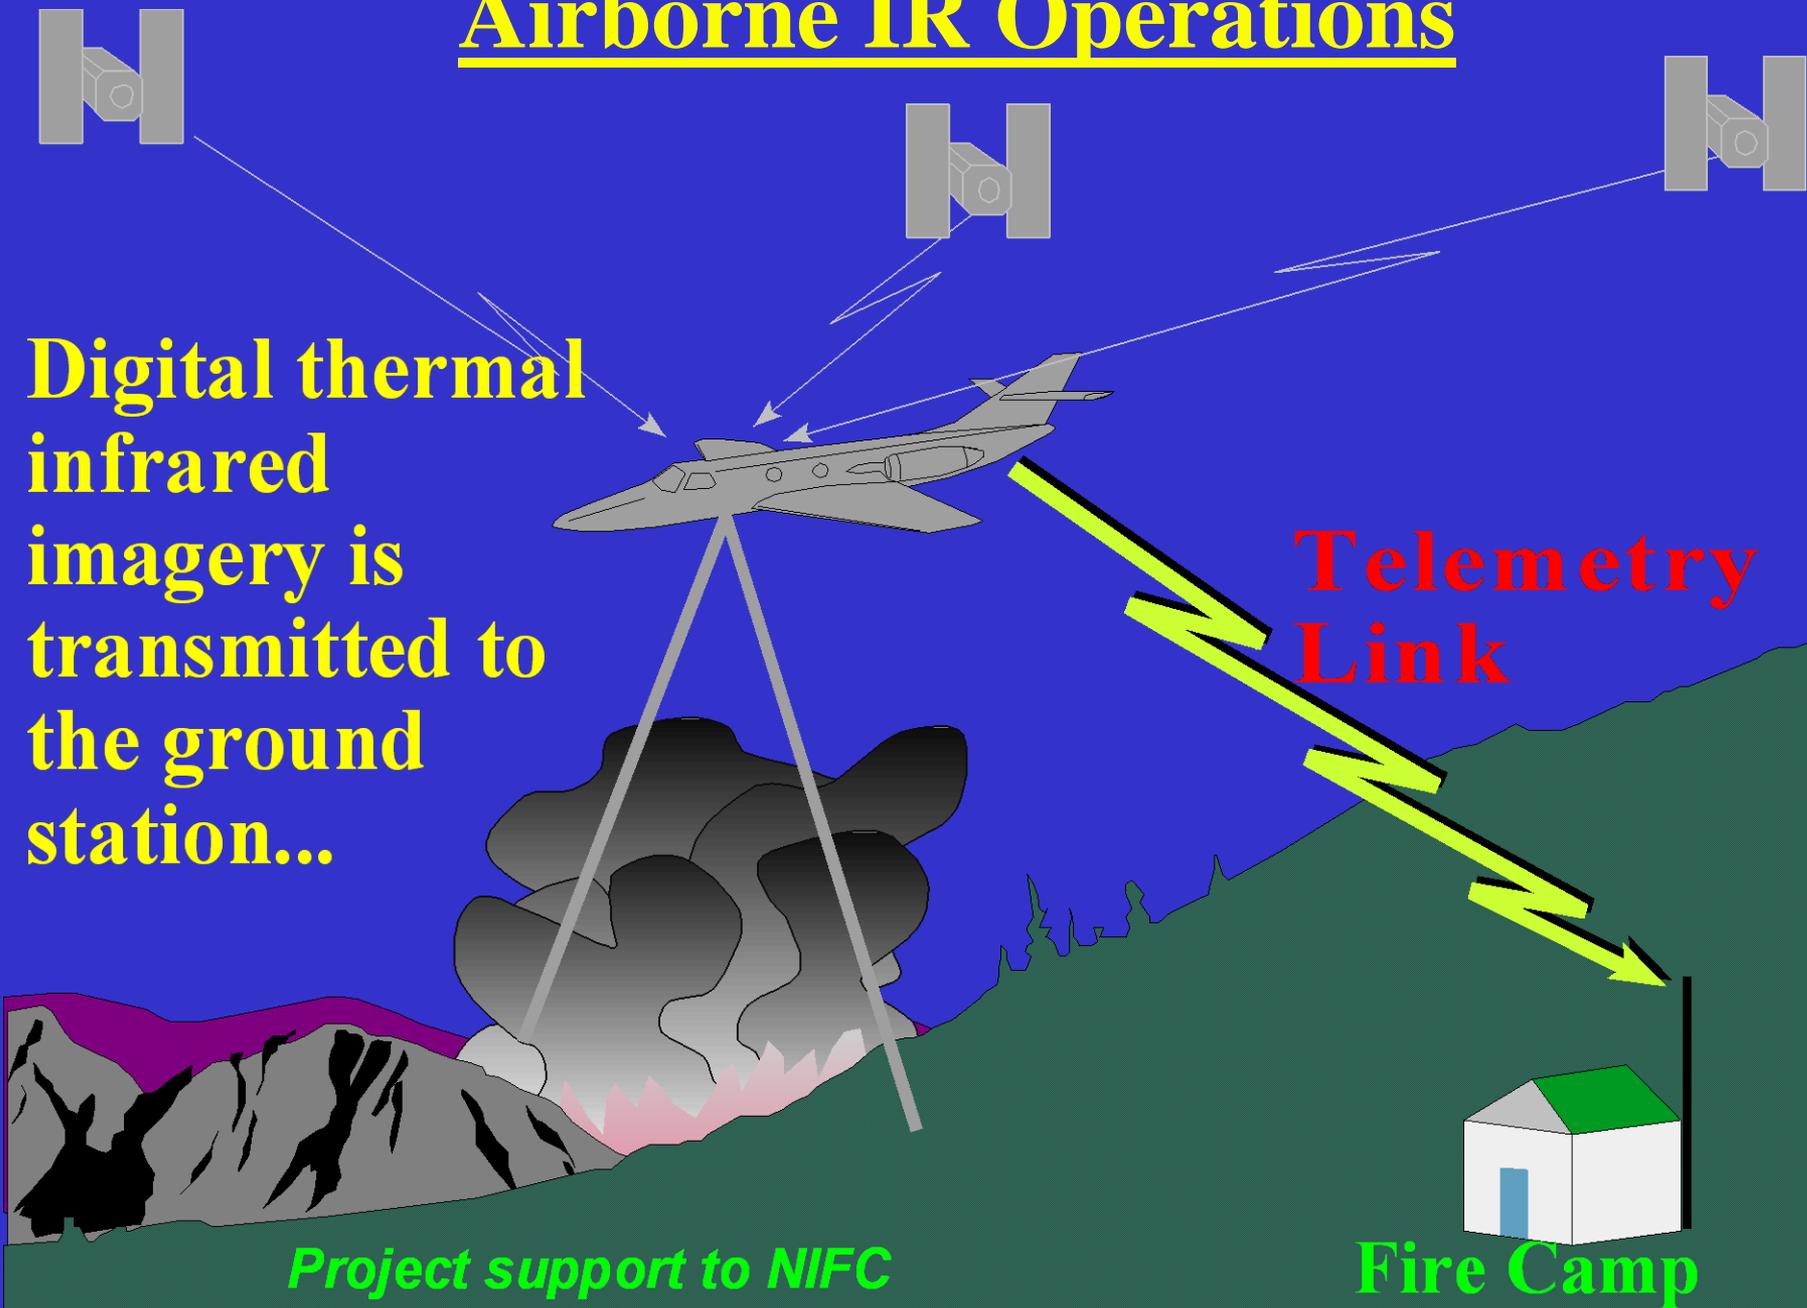

# Mapping Emphasis Varies by Fire Progress

- Initially, primary interest is in fire perimeter, active fire fronts and any spot fires outside the line
- After the fire is mostly contained, interest shifts to internal fire progress and success of backfires
- Lastly, during the mop-up phase, interest is for concentrated fire areas

# Airborne IR Operations

Digital thermal infrared imagery is transmitted to the ground station...

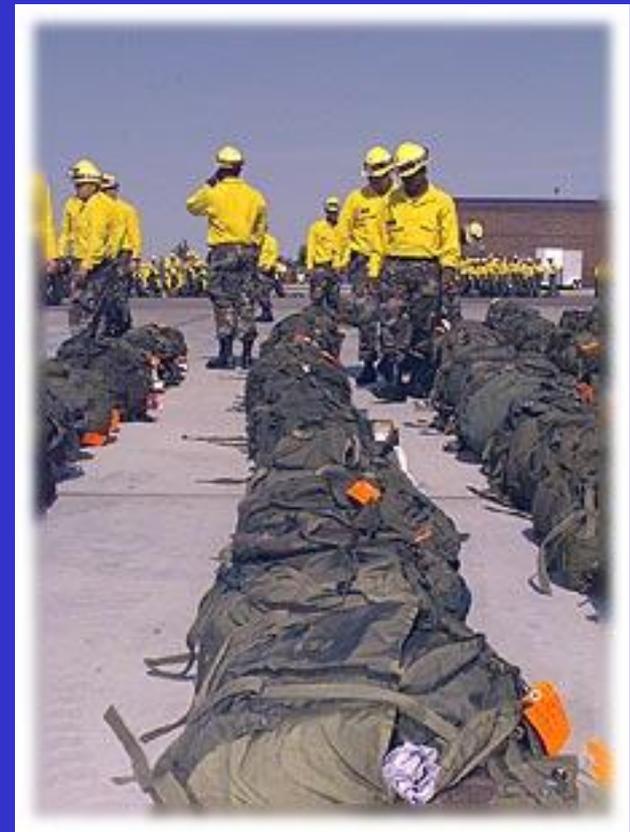

*Project support to NIFC*

*Fire Camp*

# Clear Creek Incident – Central Idaho

# Valley/Sula Complex – Western Montana

# Manter Incident – Southern California

# Manter Incident – Southern California

# **Wildland Fire Suppression Support (Fire perimeter mapping)**

- **Fire perimeter and location of intense burns, located on topographic maps or images at a scale of 1:24000 or larger**
- **Improvements required:**
  - **Increased electronic delivery speeds of image derived products or literal images directly to the incident command**
  - **Georeferenced and terrain corrected products**
  - **Fuels, terrain, infrastructure, natural and man made fire breaks must be clearly identified on products**
  - **Available for 5a.m. Incident command planning and briefing session**

# Wildfire Suppression Support

- Air Tanker & Helibucket
- Medivac
- Equipment recovery
- Hazards avoidance
- Staging areas
- Urban boundaries
- Fire perimeter
- Line location
- Water sources
- Firefighter safety

# Remote Sensing Needs for Fire and Fuels Management

- **Seasonal Fuel Moisture and Fire Hazard Mapping**
- **National Fuel Mapping**
  - Higher resolution than current maps
  - Field validation; links to ground-based sampling
  - Periodic updates
  - Uniform national system
- **Mapping of current fire activity on a national level**
  - Real-time mapping of specific fires (aircraft & satellite)
- **Mapping of burned areas and fire severity**
  - No national data base currently exists
  - Improved Methods for mapping severity & linking to fire effects
  - Essential for understanding global, national, regional effects

# International Programs Support

## Assessing the Causes & Impacts of Fires in Southeast Asia

Remote Sensing  
Applications Center  
Salt Lake City, UT

International Center for  
Research in Agroforestry  
Center for International  
Forestry Research

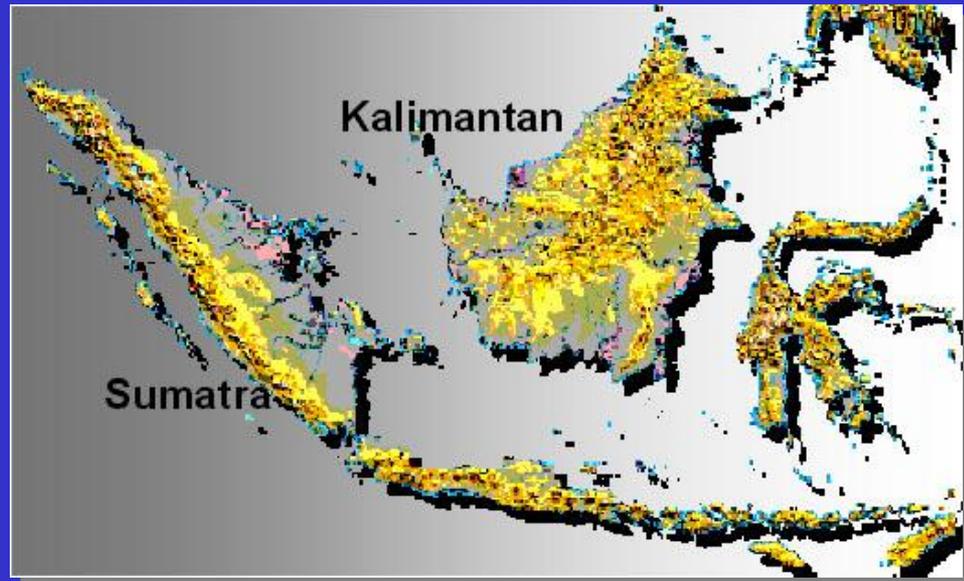

# Causes & Impacts of Fires

During 1997 and 1998 an estimated 9.5 million hectares burned in Indonesia, mostly in Sumatra and Kalimantan.

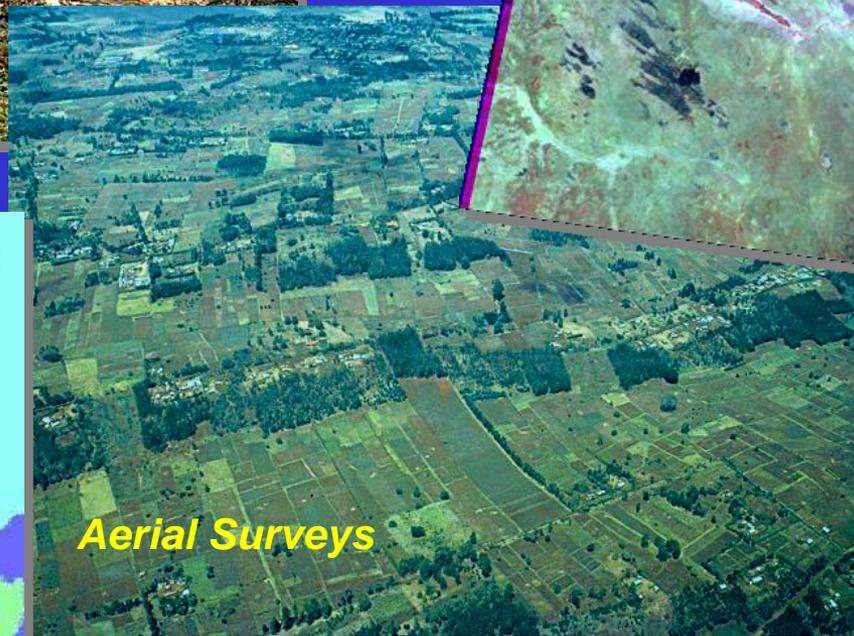

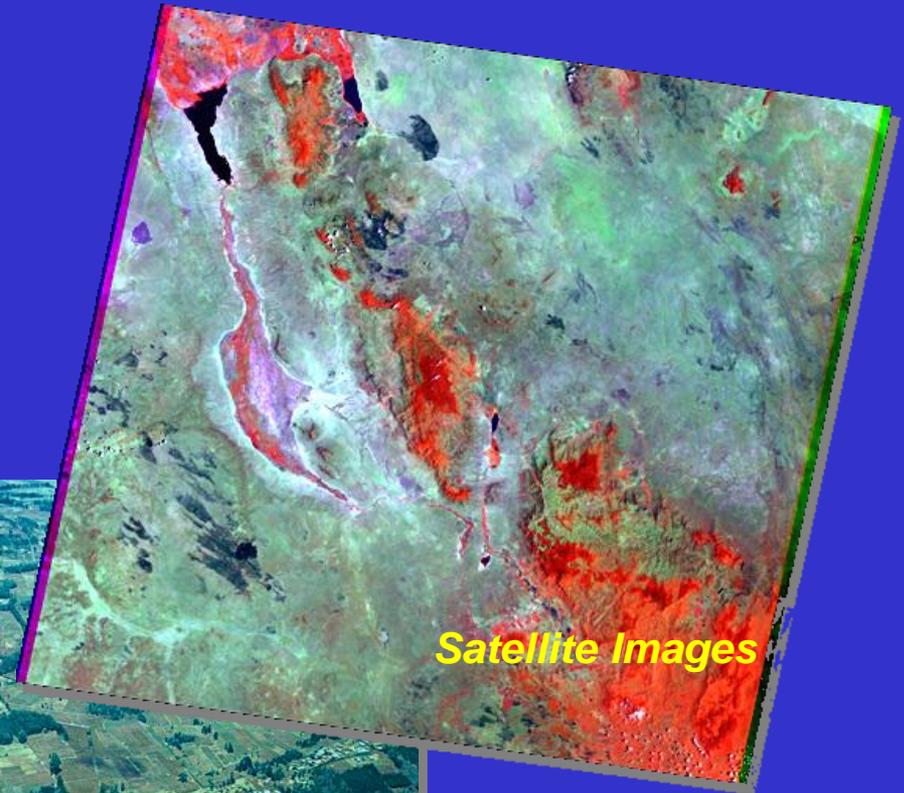

This study uses remote sensing and field surveys to answer the following questions:

- What?
- How much?
- Who?
- Why?
- Where?

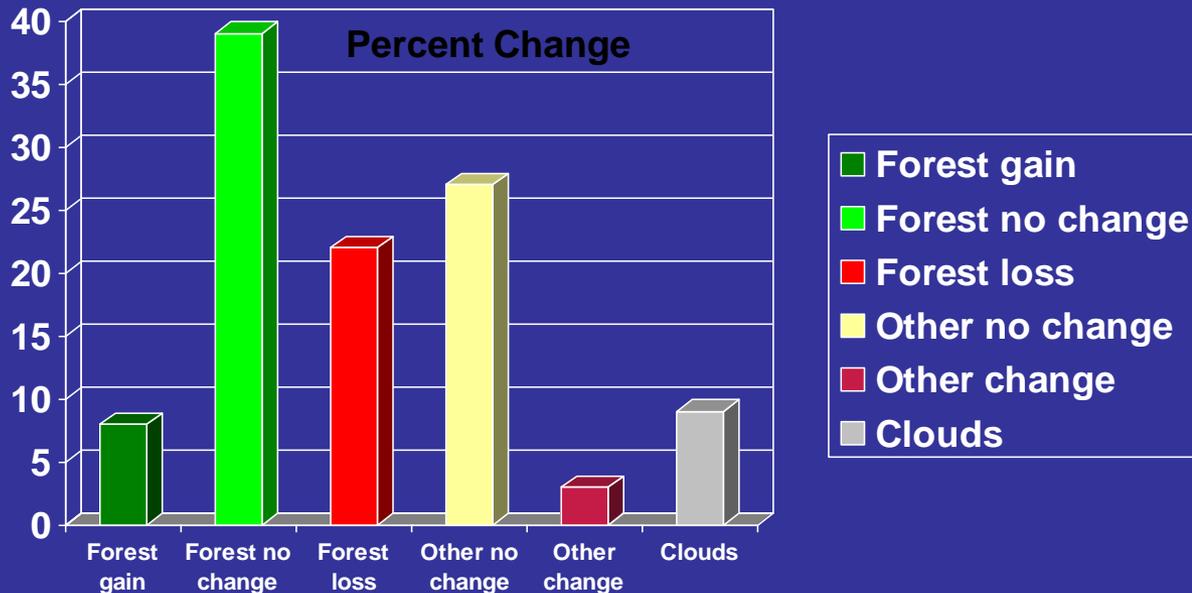

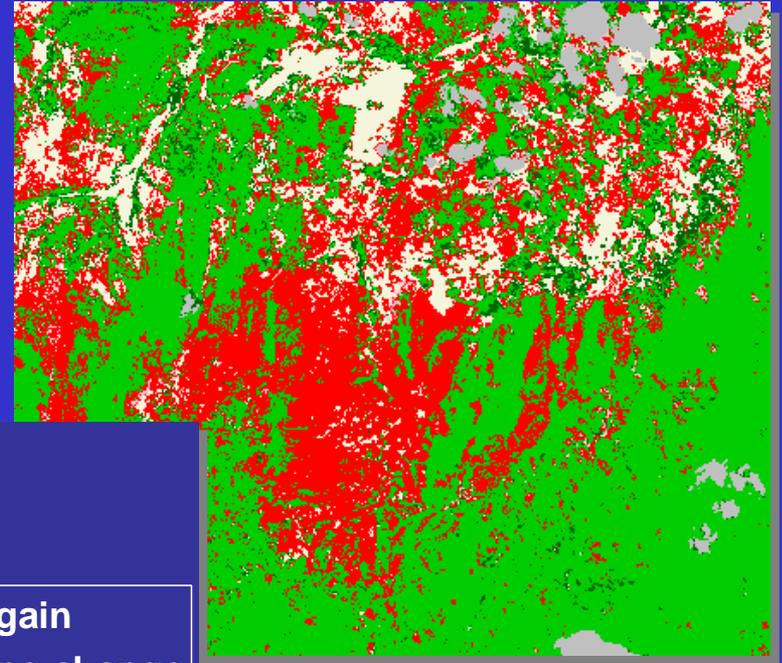

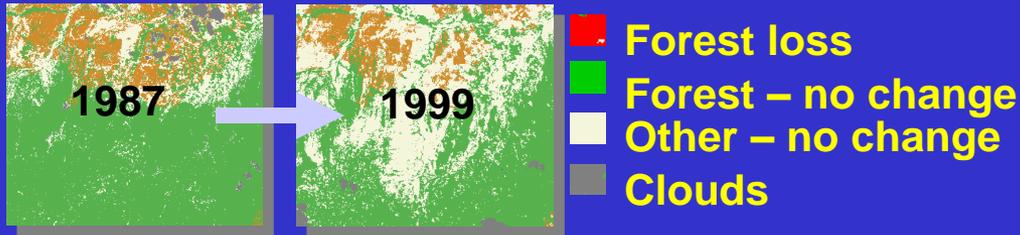

# Eastern Arc Mountains, Kenya and Tanzania

Mapping and Monitoring is being accomplished in three ways

# Eastern Arc Mountains, Kenya and Tanzania

## Taita Hills, Kenya Study Area

# Collaborative Problem Solving

- Building partnerships with our publics, scientists, federal, state, tribal, and local agencies.

## Internet-based Forest Plan Revision Process

- Working together to:
  - Define goals
  - Define issues
  - Collect information
  - Identify solutions

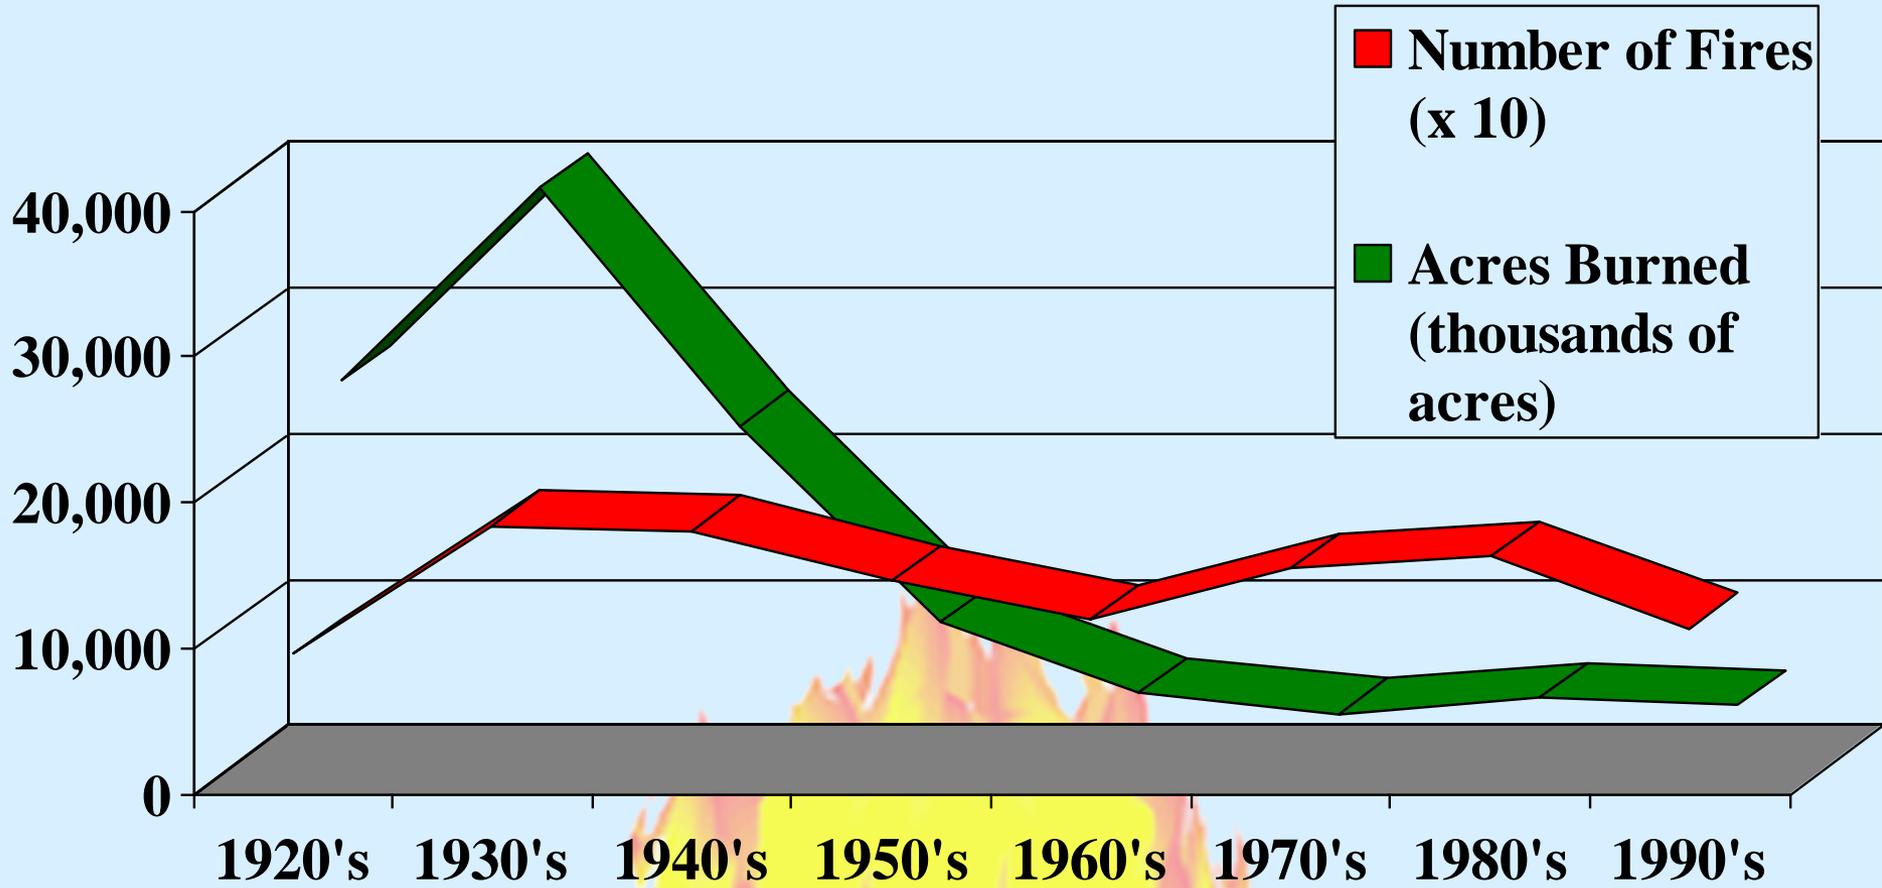

The screenshot shows a web browser window titled "SW IDAHO ECOGROUP - Microsoft Internet Explorer". The interface includes a menu bar (File, Edit, View, Go, Favorites, Help) and a "Links" button. The main content area is divided into several sections:

- Management Alternatives:** A dropdown menu with "Select" as the current option.
- Background Image:** A dropdown menu with "Select" as the current option.
- Refresh:** A button to refresh the page.
- Available Reference Layers:** A section with the text "(multiple selections are possible)" and several checkboxes:
  - Streams
  - Counties
  - Local Towns
  - Major Cities
  - Land Ownership
  - SWIE Boundary
  - SWIE Forest Boundrys
  - Fish and Game Boundrys
  - Interstate Hwys
  - US Hwys
  - State Hwys
  - Hwy Labels
- On Map Click:** A radio button selected for "Zoom In by 2X".
- Approximate Scale 1:** A text input field containing "7,250,885".
- SWIE Interactive Map:** A small thumbnail map of Idaho with a green region highlighted.
- Welcome! SW Idaho Ecogroup Management Alternatives Mcp:** A yellow box with a welcome message.
- Main Map:** A large map of Idaho showing various layers, including major cities (Alena, Boise, Twin Falls, Pocatello) and forest boundaries.

The browser's status bar at the bottom shows "Done" and "Local intranet zone".
